This library was derived from the pig estrous cycle. The library was derived from the library UNL-P-T2. The tag is a string of 5-6 nucleotides present between the Not I site and the oligo-dT track. The library was constructed as described by Bonaldo, Lennon and Soares, Genome Research 6: 791-806

pools of cells were isolated from a GenomeScreen(TM) library. The

pools of cells were isolated by retroviral integration of a gene

library of cells was generated by retroviral integration of a gene

togging element consisting of: 1) A promoterless beta-lactamase

proceeded by a splice acceptor as a reporter for gene expression;

2) A promoter driving neomycin resistance followed by a splice

denor to trap downstream exons. 3' RACE from neomycin gene was

denor to trap downstream exons. 3' RACE from neomycin gene was

portformed using total RNA from isolated pools. Output was shotgun

clared in pamp-1 and used to transform DH5-alpha competent

clared in pamp-1 and used to transform DH5-alpha competent

CDNA library was prepared and sequenced in Mouse Genome EDNA library was prepared and sequenced in Mouse Genome Encyclopedia Project of Genome Exploration Research Group in Riken Genomic Science Science Laboratory in RIKEN.

Division of Experimental Animal Research in Riken contributed to prepare mouse tissues. First strand CDNA was primed with a primer [5] GACAGAGAGGAGAGAGGACTCTTTTTTTTTTTTTTTVN 3/], cDNA was [6] GACAGAGAGGAGAGAGGACTCTTTTTTTTTTTTTTTVN 3/].

No. is the number of results predicted by chance to have a
score greater than or equal to the score of the result being printed,
and is derived by analysis of the total score distribution.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     This cDNA clone codes for Down syndrome-cell adhesion molecule CC DS-CAM1 (see AAW42086), a cell surface glycoprotein belonging to a CC novel subclass of the Iq superfamily with highest homology to novel subclass of the Iq superfamily with highest homology to cell adhesion molecules. A modified direct cDNA selection CC technique was applied to bacterial and Pl artificial chromosomes CC brain. A unique cDNA fragment, designated ESI (see AAV31982), was CC brain. A unique cDNA fragment, designated ESI (see AAV31982), was CC obtained and used to screen a trisomy 21 human foetal brain (14-wk QC trapping. The complete DS-CAM1 cDNA sequence was deduced from CC overlapping clones. A splice variant cDNA (see AAV31985), encoding CC overlapping clones. A splice variant cDNA and maps at chromosome CC DS-CAM gene spans 900-1200 kb of genomic DNA and maps at chromosome CC 1922-2-23. The invention also provides murine DS-CAM partial CC transgenic animals, antisense oligonucleotides, and primers useful CC transgenic animals, antisense oligonucleotides, and primers useful CC associated with developmental and neurological processes. They can be used in e.g. neural prosthetic devices used in entubulation CC methods of repairing (regenerating) damaged or severed peripheral CC cown syndrome, mental retardation, holoprosencephalv, agenesis of CC Down syndrome, mental retardation, holoprosencephalv, agenesis of

cy question) clink library. Farther, cames were obtained by exon CC (respaint, and the complete PS CAM2 clink sequence was identified. CC DS-CAM2 is a splice variant of membrane-bound DS-CAM1 (see AAW42086) CC and is deleted for the entire transmembrane domain. The DS-CAM CS espans volo-1200 kb of genomic DNA and maps at chromosome CC 21q22.2-22.3. The invention also provides murian DS-CAM partial CC 21q22.2-22.3. The invention also provides murian DS-CAM partial CC companies (see AAV41985-87), expression vectors and host cells, and grangenic animals, antisense oligonucleotides, and primers useful CC ransgenic animals, antisense oligonucleotides, and primers useful CC associated with developmental and neurological DS-CAM polypeptides are CC associated with developmental and neurological processes. They can CC methods of repairing (regenerating) damaged or severed peripheral CC merves. The products can also be used in detection, diagnosis and CC therapy of developmental and neurological abnormalities such as CC compus callosum, or schizencephaly. Antisense oligonucleotides CC are used for inhibiting translation of mRNA.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           WPI; 199

                                                                                                                                                                                                                                                                                                                                                    DS-CAM2 (see AAM42087), an extracellular, soluble protein belonging to a novel subclass of the 1g superfamily with highest homology to neural cell adhesion molecules. A modified direct cDNA selection technique was applied to bacterial and Plartificial chromosomes between ETS2 and MXI by using cDNA from trisomy 21 human foetal brain. A unique cDNA fragment, designated E51 (see AAV31982), was obtained and used to screen a trisomy 21 human foetal brain (14-wk
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            DS-CAM2; Down syndrome-cell adhesion molecule:
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Human Down syndrome-cell adhesion molecule
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       28-SEP-1998
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               23-OCT-1997;

The

invention relates

to

human

nucleic acids

(AA157798-AA161369)

```
the encoded polypeptides (AAM38642-AAM42213) with nootropic, immunosuppressant and cytostatic activity. The polynucleotides are useful ingene therapy. A composition containing a polypeptide or polynucleotide of the invention may be used to treat diseases of the peripheral nervous system, such as peripheral nervous injuries, peripheral neuropathy and localised neuropathies and central nervous system diseases, such as localised neuropathies and central nervous system disease, such as Alzheimer's, Parkinson's disease, Huntington's disease, amyotrophic lateral sclerosis, and Shy-Drager Syndrome. Other uses include the utilisation of the activities such as: Immune system suppression, and thrombolytic activity, chemotactic/chemokinetic activity, haemostatic activity, activity, cancer diagnosis and therapy, drug screening, assays for receptor activity, arthritis and inflammation, leukaemias and constraints.
                                                       specification.
                                                                               The sequence data for this patent did not
                                                                                                                 disorders
                                                                                              form part of the printed

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      28-SEP-1998
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      AAV31985
                                                                                                                                                                                                                            This cDNA sequence comprises the 5' region of a cDNA clone for murine Down syndrome cell adhesion molecule (DS-CAM), a member of a novel subclass of the 1g superfamily with homology to neural cell adhesion molecules. The middle region (see AAV31986) and 3' region (see AAV31987) of the clone are also provided. The murine DS-CAM clone was isolated from a C57 Black/6 mouse brain cDNA library using human DS-CAM cDNA (see AAV31981 and AAV31988) as
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    W09817795-A
                                                 cDNA library using numen by con con con concepts the invention also provides human DS-CAM proteins (see probe. The invention also provides human DS-CAM proteins (see ARW42086-87), as well as expression vectors and host cells. ARW42086-87), as well as expression vectors and host cells transgenic animals, antisense oligonucleotides, and primers useful consisted with developmental and neurological processes. They can be used in e.g. neural prosthetic devices used in entubulation methods of repairing (regenerating) damaged or severed peripheral nerves. The products can also be used in detection, diagnosis and therapy of developmental and neurological abnormalities such as Down syndrome, mental retardation, holoprosencephaly, agencesis of the corpus callosum, or schizencephaly. Antisense oligonucleotides
                                                                                                                                                                                                                                                                                                                                                                                                 New isolated Down's Syndrome-cell adhesion molecule develop products for detection, diagnosis and therapy developmental and neurological abnormalities

                                                                                                                                                                                                                                                                                                                                                                                                  This cDNA sequence comprises the middle region of a cDNA clone for murine Down syndrome-cell adhesion molecule (DS-CAM), a member of a novel subclass of the Ig superfamily with homology to neural cell adhesion molecules. The 5' region (see AAV31985) and 3' region (see AAV31987) of the clone are also provided. The murine DS-CAM clone was isolated from a C57 Black/6 mouse brain cDNA library using human DS-CAM cDNA (see AAV31981) and AAV31988) probe. The invention also provides human DS-CAM proteins (see AAV31986), as well as expression vectors and host cells, transgenic animals, antisense oligonucleotides, and primers usefu for amplification of DS-CAM nucleic acids. DS-CAM polypeptides a associated with developmental and neurological processes. They cassociated with developmental and neurological processes.
                                                                                                                                                                                                                                                                                                           associated with developmental and neurological processes. They can be used in e.g. neural prosthetic devices used in entubulation methods of repairing (representating) damaged or severed peripheral nerves. The products can also be used in detection, diagnosis and therapy of developmental and neurological abnormalities such as Down Syndrome, mental retardation, holoprosencephaly, agenesis of the corpus callosum, or schizencephaly. Antisense oligonucleotides

CC for murine Down syndrome-cell adhesion molecule (DS-CAM), a member of a novel subclass of the 19 superfamily with homology to CC meural cell adhesion molecules. The middle region (see AAV31986) CC and 5' region (see AAV31985) of the clone are also provided. The CC murine DS-CAM clone was isolated from a C57 Black/6 mouse brain CC cDNA library using human DS-CAM come (see AAV31988) as CC probe. The invention also provides human DS-CAM proteins (see CAM42086-87), as well as expression vectors and host cells, CC transgenic animals, antisense oligonucleotides, and primers useful CC transgenic animals, antisense oligonucleotides, and primers useful CC associated with developmental and neurological processes. They can CC methods of repairing (regenerating) damaged or severed peripheral CC therapy of developmental and neurological abnormalities such as CC Down syndrome, mental retardation, holoprosencephaly, agenesis of CC the corpus callosum, or schizencephaly. Antisense oligonucleotides
                                                                                                                                                                                                                                                                                                                                                                             New isolated Down's Syndrome-cell adhesion molecule -develop products for detection, diagnosis and therapy developmental and neurological abnormalities
                                                                                                                                                                                                                                                                                                                                                    Claim
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              25-OCT-1996;

                                                                                                                        The invention relates to human nucleic acids (AA157798-AA161369) and the encoded polypeptides (AAM38642-AAM42213) with nooLropic, immunosuppressant and cytostatic activity. The polynucleotides are useful in gene therapy. A composition containing a polypeptide or polynucleotide of the invention may be used to treat diseases of the peripheral nervous system, such as peripheral nervous injuries, peripheral neuropathy and localised neuropathies and central nervous system diseases, such as localised neuropathies and central nervous system diseases, such as Alzheimer's, parkinson's disease, Huntington's disease, amyotrophic lateral sclerosis, and shy-Drager Syndrome. Other uses include the utilisation of the activities such as: Inmune system suppression, and thrombolytic activity, chemotactic/chemokinetic activity, haemostatic assays for receptor activity, arthritis and inflammation, leukaemias and assays for receptor activity, arthritis and inflammation, leukaemias and
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Human

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            applied to bacterial and P1 artificial chromosomes between ETS2 and MX1. E51 was used as a probe to screen the trisomy 21 foetal brain library. 62 Clones were isolated from the 2 million clones of the original library. Overlapping clones were obtained that were used to deduce a full-length sequence (see AAV31981) coding for novel Down syndrome-cell adhesion molecule DS-CAM1 (see AAW42086). A splice variant, DS-CAM2 (see AAV31988), was also identified. DS-CAM polypeptides are associated with developmental interface.

inappropriate cytokine receptor protein expression. The polypeptides may also be used as antiquens in the production of antibodies, and in mayseys to identify modulators and inhibitors. Disorders that may be prevented, diagnosed and/or treated by the above methods include, for example immune system disorders, inflammatory disorders, immuno modulation, immune cell stimulation and proliferation, allergic reactions, aberrant cytokine receptor signalling and/or over expression of cytokine responses, cancers, cardiovascular disorders, angiogenic disorders, would healing and requireration, infectious diseases and
                                                                                                                                                                                                                                                                                                                 The present sequence encodes a human cytokine receptor-like protein. The cytokine receptor-like polypeptides and polynucleotides may be used in the prevention, diagnosis and treatment of diseases associated with

cc treating or ameliorating medical conditions, e.g., by protein or gene cc therapy. Pathological conditions can be diagnosed by determining the camount of the new protein in a sample or by determining the presence of cc mutations in the new genes. Specific uses are described for each of the cc 29 genes, based on the tissues in which they are most highly expressed, and include developing products for the diagnosis or treatment of cc annormalities, haematopoietic discours, foetal and developmental cc allergies, neurological disorders (e.g., rhematoid arthritis), inflammation, cc allergies, neurological disorders (e.g., Alzheimer's disease, cardiovascular disorders, sepsis, diseases of the immune system, cc ardiovascular disorders, appropriately, sepsis, disease, atherosclerosis, cc ardiovascular disorders, pregnancy-related disorders, anthona, asthma, cc kin disorders, and infections. The proteins can also be used to aid wound comburn, to maintain organs before transplantation, for supporting cell counture of primary tissues, to regenerate tissues, to identify their cognate ligands or binding partners, and in chemotaxis, and can be used a aleviating symptoms associated with the disorders mentioned above, and in diagnostic immunoassays e.g., ratioimmunoassay or enzyme linked communosorbent assay (ELISA). The present sequence represents a human secured protein-encoding CDNA of the invention.

The present invention describes primer sets for synthesising 5602 full-length cDNAs defined in the specification. Where a primer set comprises: (a) an oligo-dT primer and an oligonucleotide comprises one of the complementary strand of a polynucleotide which comprises one of the 5602 nucleotide sequences defined in the specification, where the oligonucleotide comprises at least 15 nucleotides; or (b) a combination of an oligonucleotide comprising a sequence complementary to the complementary strand of a polynucleotide which comprises a 5'-end sequence and an oligonucleotide comprises a 3'-end sequence complementary to the polynucleotide which comprises a 3'-end sequence, where the oligonucleotide comprises a 1'-end sequence, where the oligonucleotide comprises at least 15 nucleotides and the combination of the 5'-end sequence/3'-end sequence is selected from those defined in
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          AA1106899;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      ААН06899
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          07-FEB-2001
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        EP1074617-A2
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Human cDNA clone (5'-primer)
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           26-JUN-2001

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   the specification. The primer sets can be used in antisense therapy and in gene therapy. The primers are useful for synthesising polynucleotides, particularly full-length cDNAs. The primers are also useful for the detection and/or diagnosis of the abnormality of the proteins encoded by the full-length cDNAs. The primers allow obtaining of the full-length cDNAs. The primers allow obtaining of the full-length cDNAs easily without any specialised methods. AAH03168 to AAH13628 and AAH13639 to AAH13742 represent human cDNA sequences; AAB92446 to AAH3639 represent human amino acid sequences; and AAH13629 to AAH13632 and represent oligonucleotides, all of which are used in the exemplification of the communication of the 
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     3008 tcaccatggaaggctccccaagaaacatttgcaaaatgggattatccgtggctaccaaatag

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   the specification. The primer sets can be used in antisense therapy and in gene therapy. The primers are useful for synthesising polynucleotides, particularly full-length cDNAs. The primers are also useful for the detection and/or diagnosis of the abnormality of the proteins encoded by the full-length cDNAs. The primers allow obtaining of the full-length cDNAs casally without any specialised methods. Anti31316 to AAH13628 and AAH13633 to AAH13642 represent human cDNA sequences; AAB92446 to
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            sequence and an oligonucleotide comprising a sequence complementary to a polynucleotide which comprises a 3'-end sequence, where the oligonucleotide comprises at least 15 nucleotides and the combination of the 5'-end sequence/3'-end sequence is selected from those defined in
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              The present invention describes primer sets for synthesising 5602 full-length cDNAs defined in the specification. Where a primer set comprises: (a) an oligo-dT primer and an oligonucleotide complementary to the complementary strand of a polynucleotide which comprises one of the 5602 nucleotide sequences defined in the specification, where the oligonucleotide comprises at least 15 nucleotides; or (b) a combination of the complementary to the compl
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Primer sets for synthesizing polynucleotides, particularly the 5602 full-length cDNAs defined in the specification, and for the detection and/or diagnosis of the abnormality of the proteins encoded by the
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    02-MAY-2000;
09-JUN-2000;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             07-FEB-2001

The DNA is useful for production of the recombinant protein, which is a protein tyrosine phosphatase which may be involved in the growth and differentiation of osteoblasts and brain cells and is useful for identifying compounds that modulate PTP-OB activity and as a therapeutic agent for treating PTP-OH-related diseases.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         01-DEC-1994;

     Pred. No. is the number of results predicted by chance to have a
score greater than or equal to the score of the result being printed,
and is derived by analysis of the total score distribution.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         ..
